Summary

A Full Stack Developer with hands-on experience in MongoDB, Express.js, React.js, and Node.js. Developed RESTful APIs and full-stack web applications; solved 400+ DSA problems on LeetCode and GeeksforGeeks.

Education

Parul Institute Of Technology	2022 - 2026
Bachelor of Technology (B.Tech) in Computer Science and Engineering	(CGPA: 8.30)
Marudhar Public School, Pali	2019 - 2022
12 th (R B S E)	(Percentage: 76.2%)
10 th (R B S E)	(Percentage: 68.8%)

Technical Skills

- **Frontend** : JavaScript, TypeScript, React.js, Next.js
- **Backend**: Express.js, Node.js, REST APIs
- **Databases**: MongoDB, PostgreSQL
- **Tools** : Git, GitHub, Postman, Docker, LLM's, GenAI
- **Coursework**: DSA(400+ problems), DBMS, OOP, OS Basics

Experience

Mern Stack Developer Intern iTUX Solutions	Jan 2026 - Apr 2026
• Developed and deployed 5+ server-side e-commerce modules (product catalog, cart, checkout) for live platform handling 1000+ SKUs with Next.js and Express.js • Optimized frontend bundle size by ~30% through code-splitting and lazy loading; improved Lighthouse scores from 65→85+ in performance • Integrated REST APIs for payment processing and inventory management; reduced API response latency by ~40% through query optimization.	

Projects

CreatorFlow AI GitHub — AI Powered YouTube Content Automation Platform	June 2026 - July 2026
Technologies Used: Next.js, TypeScript, PostgreSQL, Prisma ORM, FFmpeg, yt-dlp, Google OAuth2, YouTube Data API, Telegram Bot API, Docker, Canvas, Ollama (qwen2.5:7b-instruct)	
• Built end-to-end YouTube Shorts automation: Telegram bot collects user input and channel selection → Next.js backend orchestrates video download, LLM-driven script generation (Groq/Llama), FFmpeg editing, and YouTube API publishing • Designed multi-user, multi-channel architecture with PostgreSQL for channel configuration storage, OAuth2 token management, and concurrent request handling • Implemented complete automation pipeline reducing manual video production time by ~85% (from 45 min to 7 min per video); containerized with Docker for production deployment	
Horticulture E-commerce Web App GitHub — Plants based e-commerce web-app	Jul 2025 - Sep 2025
Technologies Used: MongoDB, Express.js, React.js, Node.js	
• Built full-stack MERN e-commerce platform with 20+ plant products, multi-category search/filters, user authentication, shopping cart, and checkout; MongoDB schema supporting product catalog, user profiles, and order history • Developed responsive React.js frontend with 18+ reusable components for product discovery, user flows, and admin interface; implemented Express.js backend with 15+ RESTful API endpoints for auth, product management, cart, and orders • Engineered admin dashboard with complete product CRUD operations, inventory tracking, and role-based access control; optimized database queries for product search and filtering across multiple categories
